                                 The invention relates to peptide fragments of the Escherichia coli heat labile enterotoxin (Etx) and its closely related homologue, cholera to toxin (Ctx) from vibrio cholerae which do not bind to the ubiquitous from vibrio collerae which do not bind to the ubiquitous composed of one A subunit and five identical B subunits. The A subunit is responsible for toxicity, possessing adenosine diphosphate (App) Appribosyltransferase activity, while the B subunits (EtxB and CtxB) facilitate the entry of subunit A into the host cell via the binding and cross-linking of GM-1 receptors. Although GM-1 binding is responsible or some of the effects of Etx and Ctx, it has been found that certain effects of the toxins, such as immunomodulation, are not mediated through GM-1 binding. The peptides of the invention are fragments of the cornal EtxB and CtxB, except that they do not bind or cross link GM-1. They may also be used in medicine as an immunomodulator or adjuvant. They may also be used as an inhibitor for toxin-induced diarrhoea. They may also be used as an inhibitor for toxin-induced diarrhoea. They may also be used as an inhibitor for toxin-induced diarrhoea. Composition for composition for treathny, preventing and/or modulating a disease associated with an immune disorder and/or toxin-induced diarrhoea. The invention relates to peptide fragments of the Escherichia coli heat labile enterotoxin (Etx) and its closely related homologue, cholera toxin (Ctx) from vibrio cholerae which do not bind to the ubiquitous (M-1 ganglioside receptors on host cell surfaces. Both Etx and Ctx are composed of one A subunit and five identical B subunits. The A subunit is responsible for toxicity, possessing adenosine diphosphate (AbP) Abpribosyltransferase activity, while the B subunits (EtxB and CtxB) facilitate the entry of subunit A into the host cell via the binding and cross-linking of GM-1 receptors. Although GM-1 binding is responsible for toxins, such as immunomodulation, are not mediated through GM-1 binding. The peptides of the invention are fragments of the cormal EtxB and Ctx, it has been found that certain effects of the toxins, such as immunomodulation are fragments of the cormal EtxB and CtxB subunits, except that they do not bind or cross link GM-1. They may also be used an medicine as an immunomodulator or adjuvant. They may also be used as an inhibitor for toxin-induced diarrhoea. Therefore, the peptides may be used in the production of a composition for treating, preventing and/or modulating a disease associated with an immune disorder and/or toxin-induced diarrhoea. Sequences AAV87460-Y87463 represent preferred peptides of the invention, AAY87460 being
                                                                                                                                                                                     Cholera toxin subunit B; CtxB; heat labile enterotoxin subunit B; EtxB; beta-4-alpha-2 loop; GM-1 ganglioside receptor; immunomodulation; adjuvant; immune disorder; diarrhoea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Derivatives of Escherichia coli heat labile enterotoxins useful a immunomodulators and for treating diarrhea and which do not bind glycolipid receptor {\tt GM-1} .

AAY87463 standard; peptide; 21 AA.

```
The invention relates to peptide fragments of the Escherichia coli heat corn labile enterotoxin (Etx) and its closely related homologue, cholera (CC labile enterotoxin (Etx) and its closely related homologue, cholera (CC labile enterotoxin (Etx) end closely related homologue, choleras (CX) its responsible for toxicity, possessing adenosine diphosphate (ADP) ADP-crosponsible for toxicity, possessing adenosine diphosphate (ADP) ADP-crosponsible for toxicity, while the B subunits (EtxB and CtxB) cribosyltransferase activity, while the B subunits (EtxB and CtxB) cross-linking of GM-1 receptors. Although GW-1 binding is responsible cross-linking of GM-1 receptors. Although GW-1 binding is responsible cross-linking of GM-1 receptors. Although GW-1 binding is responsible crosponsible crosponsible crosponsible crosponsible crosponsible crosponsible crosponsible crosponsible crosponsible data and Ctx it has been found that certain effects of EtxB and/or CtxB, exerting the same effects as normal EtxB and CtxB subunits, except that they do not bind or cross link crosmal EtxB and CtxB subunits, except that they do not bind or cross link crosponsible crospo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is encoded by a fragment of the the plasmid ptPpA93
which was used in the production of fimH fusion genes comprising
the cholera toxin B subunit inserted into the fimH gene. This insert
shows the inclusion of the B subunit into the FimH protein at position
214-226. The chimmeric genes were then opt. further modified by insertion
of the hepatitis B virus surface antigen pre-S2 region into a different
of the hepatitis B virus surface antigen pre-S2 region into a different
cof the hepatitis B virus surface antigen pre-S2 region into a different
position of the FimH adhesin of type I fimbriae. Restiction site handles
(BglII-sites) were introduced into the fimH gene, and the foreign
epitopes are then inserted in-frame. In the selected positions the
insertion of the FimH protein. The expression of the chimmeric proteins
on the surface of fimbriae on bacterial hosts illustrated the possibility
of using bacterial adhesins as general presenters of foreign antigens and
epitopes. These chimmeric genes may be used in the production of variant
FimH adhesins which may be useful for targetting active compounds
con an intendial cells to locations comprising selected receptors to which

```

```
The inventors claim cholera toxin B1 subunit sequences which carry Arg in posn. 35, 67 or 73 (AAP30264, AAP30660). Tests have shown that Arg in posns. 35, 67 and 73 play an important role in fixing these toxins to cell walls. The peptides are used in the treatment of, and vaccination against, cholera infections and animal and human infections due to E. coli (enterotoxin LT). The medicament may be administered by oral, intraperitoneal, sub-cutaneous or intravenous routes. For vaccines, pref. peptides having 15-30 AAs are injected without carriers. Unit dose when used as a medicament is 50-500mg as a vaccine 1-10mg of active cpd.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Network polymer which comprises a series of composite E. coli heat-labile toxin (LT)/heat-stable toxin (ST) polypeptide repeating untis.
                                            Sequence of amino acids 50-75 of the cholera toxin Bl subunit which carries an Arg at posns. 67 and 73.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cholera toxin B, sub-unit polypeptide(s) as vaccines and medicaments - effective against Escherichia coli and Vibrio cholerae infections, are prepd. by solid phase peptide synthesis

```
The inventors claim cholera toxin B1 subunit sequences which carry Arg in posn. 35, 67 or 73 (AAP30264, AAP30265, AAP30600). Tests have shown that Arg in posns. 35, 67 and 73 play an important role in fixing these toxins to cell walls. The peptides are used in the treatment of, and vaccination against, cholera infections and animal and human infections due to E. coli (enterotoxin LT). The medicament may be administered by oral, intraperitoneal, sub-cutaneous or intravenous routes. For vaccines, pref. peptides having 15-30 AAs are injected without carriers. Unit dose when used as a medicament is 50-500mg as a vaccine 1-10mg of active cpd.
                                                                                                               interpolypeptide cystine bonds formed between oxidized cys residues of the repeating units. This polypeptide may be used in the vaccination of mammals for protection against the enterotoxins. The composite polypeptide is made by solid phase synthesis or recombinant DNA techniques. X9 is Met or Lys, X12 is Ala or Glu, X39 is Asn or Tyr and X46 is Tyr or Asn. See also AAP50439-57.
                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence of amino acids 350-75 of the cholera toxin B1 subunit which carries an Arg at posns. 35, 67 and 73.

                                                                                                                                                                                                                                                                                                                                                                                                                                                           The repeating units are bonded together by intramolecular interpolypeptide cystine bonds formed between oxidized cys residues of the repeating units. This polypeptide may be used in the vaccination of mammals for protection against the enterotoxins. The composite polypeptide is made by solid phase synthesis or recombinant DNA techniques. X9 is Met or Lys, X12 is Ala or Glu, X39 is Asn or Tyr and X46 is Tyr or Asn. See also AAP50439-57.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Network polymer which comprises a series of composite E. coli heat-labile toxin (LT)/heat-stable toxin (ST) polypeptide repeating untis.

The structural information obtd. from these comparisons was used to identify sites which contribute to PT's biological activity. By modifying these sites the claimed PT mutants of the invention were produced, they can be used in the development of vaccines against Bordetella

Involving analysis of the 3-dimensional form of the crystalline involving analysis of the 3-dimensional form of the crystalline holotoxin. The pertursis holotoxin modification process comprises:

(1) identification of at least one amino acid (as) residue of the holotoxin for modification by analysing the 3-dimensional form of the crystalline holotoxin, in relation to known information of the protein structure and function; (2) effecting mutagenesis (by removing or replacing a nucleotide sequence encoding at least one (as)) of a tox operon; and (3) expressing mutant tox box in a Bordetella organism to produce the modified holotoxin. This method is used for modifying pertussis holotoxin, by studying its 3-dimensional crystalline structure. Modifying the holotoxin, alters its blological properties. By analysing the 3-dimensional crystalline structure of the pertussis holotoxin can be identified. This can be used to predict (as) which contribute to the toxicity of the holotoxin to produce immunoprotective, genetically-detoxified analogues of pertussis holotoxin. The present sequence represents an ADP-ribosylating toxin to be accounted by the pertussis holotoxin. The present sequence represents an ADP-ribosylating toxin the present in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NAME OF THE PROPERTY OF THE PR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to methods of preparing a pertussis holotoxin (PT) having a modified biological activity. One method comprises identifying at least 1 site in a PT that interacts with a molecule that is capable of forming a complex with the holotoxin and which molecule is an effector molecule which is an adenine nucleotide and which site contributes to toxicity, cell binding or enzymatic activity of PT. The functional interacting site(s) are identified by analysing the three dimensional structure of crystalline PT, determined by X-ray crystallogaphy. The identified interacting site(s) are modified to alter toxicity, cell binding or enzyme activity of the PT. The methods can be used to alter a biological activity such as toxicity, enzymatic activity, mitogenicity, cell binding and adjuvanticity of the PT. The three-dimensional structure of crystallogaphy or structural resemblance to other bacterial toxins such as diphtheria toxin (DT), Pseudomonas exotoxin A (ETA), the heat-labile toxin of E. coli (LT) and verotoxin-1 (VT). The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modifications to e.g. enzymatic activity, mitogenicity and cell binding of pertussin holotoxin - by identifying interaction sites of a molecule with crystalline toxin and modifying the identified site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The present invention describes a crystalline form of isolated pertussis holotoxin, in which the molecules of pertussis toxin have a three dimensional structure represented in the specification.

The complexed with a polyaaccharide molecule capable of forming a complex with the holotoxin. The crystalline form of the pertussis holotoxin can be used in a comparison with other proteins which have functional resemblance to pertussis holotoxin with the aim of modifying other proteins. Identifying the unknown sites of toxicity by comparison with the three dimensional structure of pertussis holotoxin provides a technique for detoxification of toxins to produce useful immunogenic but non-toxic analogues. It can also be used as a primary standard to measure the quantity, purity or efficacy of less pure compositions containing pertussis toxin. AAY68340 to AAY68385 represent peptides used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pertussis toxin; crystal structure; whooping cough; biological activity; lymphocytosis-promoting factor; histamine-sensitising factor; islet-activating protein.

```
The inventors claim vaccines against cholera and heat-labile E.coli toxin contg. cholera toxin fragment coupled to carrier. The toxin is esp. the fragments defined in FT, above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Recombinant constructs for expressing and opt. secreting proteins in Bordetella - comprise Bordetella promoter coupled to non-Bordetella, esp. cholera B toxin, gene or coupled to non-Bordetella leader and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ó
                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a method for producing a pertussis toxin (also designated lymphocytosis promoting factor, histamine-sensitising factor and islet activating protein) with a modified biological activity, involving analysing the crystal structure of the protein to identify active sites which can then be modified. This may lead to an alteration in the toxicity, cell binding or enzyme activity of the toxin. This can be used in the production of immunoprotective analogues of pertussis toxin is the cause of whooping cough following infection by Bordetella pertussis.

Bordetella leader sequence for secretion of a gene product which may not be of Bordetella origin, can be used for the expression in Bordetella of enzymes, antigens, immunogens, allergens, enzyme inhibitors, hormones, immunoglobulins or their fragments, toxins, mammalian proteins, structural proteins or treceptors. The Bordetella strains are particularly engineered to express the cholera toxin B subunit (this sequence). The promoters used in the constructs are selected from the Bordetella pertussis tox, that promoters or the high molecular weight (hmw) outer membrane promoter of non typable Haemophilus influenzae; leaders used in the pertussis toxin subunit S1 leader (S1-L) and the pertussin pertactin leader (PRN-L); and genes used in the constructs are selected from the choice toxin B leader (CTB-L), the constructs are selected from the choice of synthetic cholera toxin B gene (ctb) and the hmw1 and hmw2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A transgenic plant comprising or expressing a DNA sequence encoding an immunogenic agent can be used as an oral vaccine for animals. The vaccine is administered by the oral consumption of the plant and provides the first known functional method for immunising animals using transgenic plants, where the plants express bacterial antigens that act as both immunogens and adjuvants. The method provides an inexpensive production and edlivery system for such antigens to animals. This is the LT-B Escherichia coli toxin subunit and its coding sequence was used in the construction of such a transgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Transgenic plants contg.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAW06606 is a mature cholera toxin B subunit (CTB)/heat labile enterotoxin B subunit (LTB) hybrid molecule. In mature CTB protein, certain amino acids (aa) were replaced with corresponding as from heat-labile enterotoxin B subunit (LTB). The specific amino acid substitutions impart LTB-specific epitope characteristics to immunogenic mature CTB. The hybrid molecules have increased cross-reactivity and are suitable for a broad spectrum vaccine to
plant. The immunogenic agent preferably comprises the LT-B or CT-B (cholera toxin B subunit) or optionally LT-A or CT-A.
                                                                                                                                                                                                                                                                                                                    Cholera toxin B subunit/heat labile enterotoxin B subunit hybrid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Heat-labile enterotoxin B sub-unit and cholera toxin B sub-unit

immunogenic mature CTB. The hybrid molecules have increased cross-reactivity and are suitable for a broad spectrum vaccine to protect against enterotoxigenic lliness. Immunogenic proteins comprising the hybrid molecules can be used to treat, or in a vaccine to prevent, enterotoxin-induced illness, e.g. diarrhoea and vomiting, in humans and animals.

Note - This sequence does not appear in the specification, it is a claimed mutant sequence of mature cholera toxin B subunit (see

In mature CTB protein, certain amino acids (aa) were replaced with corresponding as from heat-labile enterotoxin B subunit (LTB). The specific amino acid substitutions impart LTB-specific epitope characteristics to
protect against enterotoxigenic illness. Immunogenic proteins comprising the hybrid molecules can be used to treat, or in a vaccine to prevent, enterotoxin-induced illness, e.g. diarrhoea and vomiting, in humans and animals.

Note - This sequence does not appear in the specification, it is a claimed mutant sequence of mature cholera toxin B subunit (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cholera toxin B subunit/heat labile enterotoxin B subunit hybrid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Heat-labile enterotoxin B sub-unit and cholera toxin B sub-unit hybrid protein - opt. fused to immunogenic sequence for use in vaccines against enterotoxin-induced illness
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1..25

```

```
This is the amino acid sequence of the cholera toxin B subunit used in the method of the invention involving the use of nontoxic subunits as an effective adjuvant in coadministration of an antigen to birds and animals. In addition to the use of the toxin as an mucosal adjuvant, it also provides a vaccine comprising the toxin, an immunogenic amount of an antigen, and a pharmaceutically acceptable carrier. The toxin can be used with single/multiple vaccines, and it humans, since these are more effective and safer than vaccines administered subcutaneously.
                                                                                                                           Cholera toxin B subunit, nontoxic subunit; adjuvant, coadministration; antigen; bird, animal; mucosal; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New mutant cholera toxin selected from a group comprising nontoxic subunits/derivatives - effective as an adjuvant when coadministered with an antigen to birds and mammals
                                                                                             Amino acid sequence of the wild type chorela toxin B subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                            Takeda Y, Yamamoto

                                                                                                                                                                                                                                                                                                                                                      AAW06605 is the full (including the signal peptide) length cholera toxin B subunit (CTB), this sequence is described as unpublished in the specification. The mature CTB protein was used to create hybrid mutants, in which certain amino acids (aa) of CTB were replaced with corresponding as from heat-labile enterotoxin B subunit (LTB), see AAW06605 and AAW06607. The specific amino acids substitutions impart LTB-specific epitope characteristics to immunogenic mature CTB. The hybrid molecules have increased cross-reactivity and are suitable for a broad spectrum vaccine to protect against enterotoxigenic illness. Immunogenic proteins comprising the hybrid molecules can be used to treat, or in a vaccine to prevent, enterotoxin-induced illness, e.g. diarrhoea and vomiting, in humans and animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                          Heat-labile enterotoxin B sub-unit and cholera toxin B sub-unit hybrid protein - opt. fused to immunogenic sequence for use in vaccines against enterotoxin-induced illness

                                                                                                                                                                                                                                     This is the amino acid sequence of Escherichia coli beta-subunit of heat labile enteritoxin (LTB). It is used in the method of the invention to create fusion proteins which are useful as vaccinating immunogens. The fusion proteins are useful in vaccines, specifically where the antigenic peptide is an inhibin fragment for increasing the fertility of an animal (by increasing levels of follicle stimulating hormone (FSH) or production of sperm or ova), but more generally for inducing an immune response against the antigenic peptide. Vaccines are particularly administered orally, e.g. fusion protein is expressed in edible plants or animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
New nucleic acid encoding fusion of antigenic peptide and enterotoxin sub-unit - useful as vaccinating immunogen, particularly for increasing animal fertility by inducing antibodies against inhibin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 26, Al Sequence 26, Al Sequence 2, Ap Sequence 2, Ap Sequence 2, Ap Sequence 21, Ap Sequence 21, A Sequence 2, Ap Sequence 3, Ap Sequence 2, Ap Sequence 3, Ap Sequence 2, Ap Sequence 3, Ap Sequence 4, Ap Sequence 5, Ap Sequence 6, Ap Seq

Sequence 5, Application US/08952337

Patent No. 6019973

GENERAL INFORMATION:
APPLICANT: Holmaren, Jan
TITLE OF INVENTION: HYBRID MOLECULES BETWEEN HEAT-LABILE
TITLE OF INVENTION: HYBRID MOLECULES BETWEEN HEAT-LABILE
CURRENT APPLICATION HYBRID MOLECULES BETWEEN B SUBUNITS
FILE REFERENCE: 3846/000758

CURRENT APPLICATION NUMBER: US/08/952,337

CURRENT FILING DATE: 1996-01-05

EARLIER APPLICATION NUMBER: PCT/SE96/00570

EARLIER PILING DATE: 1996-05-02

EARLIER PILING DATE: 1995-05-05

NUMBER OF SEQ ID NOS: 6

SOFTWARE PRESENCE FOR WINDOWS Version 3.0

Sequence 2, Application US/09027337B
Patent No. 5972616
GENERAL INFORMATION:
APPLICANT: UNFORMATION:
APPLICANT: Tanimoto, Hirotoshi
TITLE OF INVENTION: TANG-15: An Extracellular Serine Protease Overexpressed in TITLE OF INVENTION: Breast and Ovarian Carcinomas
FILE REFERENCE: D6064
CURRENT APPLICATION NUMBER: US/09/027,337B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 448;

CURRENT FILING DATE: 1998-02-20

NUMBER OF SEQ ID NOS: 13

SEQ 1D NO 2

LENGTH: 855

TYPE: PRT

ORGANIEM: Homo sapiens

CHER INFORMATION: Amino acid sequence of TADG-15 encoded by nucleotides

OTHER INFORMATION: 23 to 2589 of Sequence 1

US-09-027-337-2
                                                                                                                                                                    Gaps

A41670

carbon-monoxide dehydrogenase (EC 1.2.99.2) beta chain [similarity] - Clostridium therma C; Species: Clostridium thermaceticum
C; Species: Clostridium thermaceticum
C; Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 28-Jul-2000
C; Accession: A41670
R; Morton, T.A.; Raggadale, S.W.; Shanmugasundaram, T.; Wood, H.G.; Ljungd, J. Biol. Chem. 266, 23824-23828, 1991
A; Title: The primary structure of the subunits of carbon monoxide dehydrogenase/acetyl-C
A; Recession: A41670
A; Status: preliminary
A; Molicule type: DNA
A; Reterences: CB:MG2727; NID:9144784; PIDN:AAA23228.1; PID:9144785
C; Superfamily: carbon-monoxide dehydrogenase beta chain; hybrid cluster [4Fe-2S-30] homc
C; Keywords: 4Fe-2S-30, 4Fe-4S; electron transfer; iron-sulfur protein; metalloprotein; C; Keywords: 4Fe-2S-30) homcloyy <4KD.
F; 256-606/Domain: hybrid cluster (4Fe-2S-30) homoloyy <4KD.
F; 289,71,76,90/Binding site: 4Fe-4S cluster (Cys) (covalent) #status predicted
F; 289,731,355,470,500,550,585/Binding site: Ni-3Fe-2S-30 cluster (His, Glu, Cys, Cys, Cys, F; 470/Modified site: cysteine persulfide (Cys) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             B85518

"Mypothetical protein 20347 [imported] - Escherichia coli (strain 0157:H7)

"Species: Bscherichia coli

"Saccession: B85518

Chorismate synthase (EC 4.6.1.4) - yeast (Saccharomyces cerevisiae)
N;Alternate names: protein G2501; protein YGL148w
C;Species: Saccharomyces cerevisiae
C;Species: Saccharomyces cerevisiae
C;Accession: S17246; S64162
R;Jones, D.G.L.; Reusser, U.; Braus, G.H.
Mol. Microbiol. 5, 2143-2152, 1991
A;Title: Molecular cloning, characterization and analysis of the regulation of the AR A;Reference number: S17246; MUID:92114793
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A; Molecule type: DNA

My Title: Complete DNA sequence of a serogroup A strain of Neisseria menigitidis 22491.

My Reference number: A81775; MUD: 20222556

My Accession: R82031

My Molecule type: DNA

My Residues: 1-284 < PARX

stress activated protein kinase (EC 2.7.-.-) JNKD - common carp
N.Alternate names: stress-activated protein kinase b
C.Species: Cyptinus carpio (common carp)
C.Species: Cyptinus carpio (common carp)
C.Date: 20-Nov-1997 #sequence_revision 20-Nov-1997 #text_change 24-Sep-1999
C.Accession: JC5694
R.Hashimoto, H.; Matsuo, Y.; Yokoyama, Y.; Toyohara, H.; Sakaguchi, M.
J. Blochem. 122, 381-386, 1997
A.Fille: Structure and expression of carp mitogen-activated protein kinases homologous t
A.Recession: JC5694
A.Status: nucleic acid sequence not shown
A.Accession: JC5694
A.Status: nucleic acid sequence not shown
A.Molecule type: mRMA
A.Residues: 1-477
C.Comment: This enzyme is a mitogen-activated protein kinase, and plays a role in egg ma
C.Comment: This enzyme is a mitogen-activated protein kinases; protein kinase homolo
C.Superfamily: unassigned Ser/Thr or Tyr-specific protein kinases; protein kinase homolo
C.Superfamily: protein kinase homology <KIN>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
